## CREATIVE FLEXIBLE SEATING

This modular seating series with its six different modular units inspires to creative and flexible seating solutions. Use them separately or in groups to create exiting configurations. Two-, three- or even more seater sofas are easily created. The innovative linking device, Quicklink, consisting of built-in magnets makes the units easy to regroup. The airy table in perforated sheet metal makes a perfect complement to the upholstered units. The high back version offers a feeling of seclusion in open areas and enables building a soft, sophisticated room within the room.

The Area series, by Anya Sebton, consists of several modular units: right, left, center and corner units with high or low back, plus two different shaped foot stools, a table in perforated sheet metal and an easy chair. All Area modules can be linked with Area Radius modules.

***“Functional Identity is the key theme in my work. Design is about combining aesthetic values together with functional and technical needs, to create a unique product.”***
